

# Oracle Business Intelligence

Improve your business efficiency, make confident decisions and rapidly respond to the changing business environment by engaging with Beyond's Business Intelligence Team.

## ORACLE BI ANALYSIS TOOLS

- Engage business users through intelligent dashboards
- Enable dynamic and pre-defined analysis by incorporating alerts and pro-active detection
- Drive business process improvement through intelligent workflow
- 'What-if' analysis and advanced reporting capabilities across the enterprise
- Gain a unified, view of the business using the Common Enterprise Information Model (BI Server). Agnostic in terms of data sources allowing access to virtually any structured data source

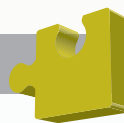

## SOA

- Directly invoke business processes as a result of business insight. For example, if the user is alerted on their dashboard to a specific event occurring such as stock running low, they can invoke a web service component or BPEL process to take appropriate action
- The deep integration with the SOA suite allows BPEL processes to be defined to deliver BI reports and alerts to users at key stages of business processes

## BI APPLICATIONS

- Oracle Business Intelligence Applications are complete, pre-built business intelligence solutions that deliver intuitive, role-based intelligence. Thousands of "out-of-the-box" dashboards and reports organised by business function and user role enable organisations to gain insight from a range of source applications, including Oracle E-Business Suite, Siebel, PeopleSoft, and third party systems e.g. SAP
- As a Certified Advantage Partner for Oracle Business Intelligence Applications, Beyond can help you to achieve comprehensive BI coverage from your ERP system including Financials, Supply Chain, HR, CRM, Projects, etc.

## DATA INTEGRATION

- We help you deliver a consolidated view of your business through the use of Data Integration technologies. Access to timely and accurate data from across the organisation is vital to making quick, smart decisions. Beyond are ideally placed to help clients select the right strategy and then choose the most appropriate technology
- Data integration can provide consolidation which leads to consistency across the organization, which provides clarity of approach and ultimately control of costs

## BEYOND CONSULTANCY

Beyond, as a Certified Advantage Partner for Business Intelligence Applications, have established themselves as one of Oracle's key partners in the provision of comprehensive Oracle business intelligence solutions.

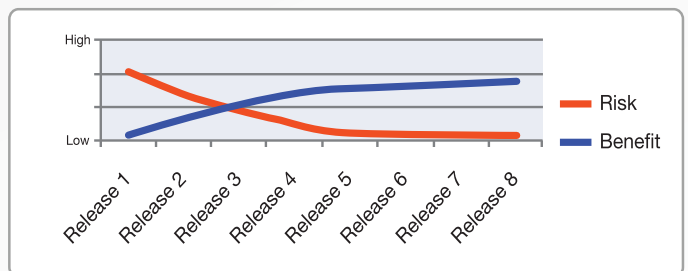

By applying an understanding of your unique business requirements with our knowledge of the tools that Oracle offers, we are confident that we can create a Business Intelligence environment to help you make better decisions and take effective actions.

Beyond have been engaged in successful, complex, business critical Oracle projects across multiple sectors (including financial services, retail, manufacturing, logistics and distribution, public sector and many others). Beyond have achieved this by developing an agile methodology which confronts risks up front, delivers value early to the business and stimulates business-user self-sufficiency resulting in less reliance upon IT departments.

By employing this tested methodology we can:

- Identify and confront risk early in the project
- Continue to reduce risk throughout the project
- Have flexibility to change plans as priorities change
- Ensure each functional release of software gives immediate business benefits

## BEYOND TRAINING AND MENTORING

In addition to offering strategic BI mentoring and consultancy services, we also offer on-site training courses including:

- Introduction to Oracle BI (1 Day)
- Oracle BI Presentation – Create reports and dashboards (2 Days)
- Oracle BI Modelling – Create models and repositories (2 Days)

### About Beyond Systems

Beyond helps companies to improve business efficiency, make confident decisions and rapidly respond to the changing business environment.
